

Case Study: Onosys

Onosys specializes in providing smart online ordering solutions to restaurants. Smart enough to adapt to your unique business processes, to deliver real-time ordering data that lets you manage effectively, and smart enough to learn who your customers are and what they like.

- Customers only have to create their accounts once and then will always conveniently be able to order food using only their username and password.
- Customers are able to store multiple delivery addresses to the same account.
- All orders are verified to be within range of the restaurant's delivery radius.
- Customers are able to view past orders and reorder the same products.
- A customer can set an order to be completed at a future time or date during which the restaurant is open.
- Place order for dinner during lunch or plan ahead for next week's conference.
- Customers can apply discount codes toward their order that gives them discounts. This also allows you to view the success of different marketing campaigns.
